 18-24)
- ~0.5m articles/d (news, blogs, twitter, facebook, youtube, forums)
- ~7.0m internet users

- ~1 million entities
- ~3 million entity terms
- Sentiment:
 - ~87% in sentence level
 - ~70% in entity level
- NER
 - ~70% with 60% recall

Social Media in numbers (1 year period)

Social Media in numbers (1 year period)

Content Lifecycle

Data Collection

- Web-page Crawlers (xpath queries, regex)
 - News Detection Content
 - o ...
- Blogs APIs
 - Blogger
 - Wordpress
 - Medium
 - 0
- Forum Crawlers
 - o PHPBB
 - vBulletin
 - O

- Social Media Streams
 - Twitter, Facebook ...
- Social Media APIs
 - Twitter, Facebook, Youtube, Instagram
- Third Party Services
 - Amazon Alexa
 - Datasift
 - o ...
- Linked Data
 - DBpedia, Google Relation Extraction Corpus

News Content

Social Media Content

Architecture

Information Flow

Challenges (I)

Πριν από 15 ώρες, 11 λεπτά

Challenges (II)

- Poor Content (outdated stories, missing media etc)
- Wrong Format (misspelling, wrong media etc)
- Legal Issues (copyright, plagiarism etc)
- Topic evolution (sport games, breaking news etc)
- Cluster Size (big news in short period etc)

The palopro.io example

Technologies

Technologies to scale up

Java & Python threaded services

RDBMS (MySQL)

Search (Solr)

Case Study - Hands On

Ways to get data

- Logstash
- Elasticsearch-twitter-river (March 2015 deprecated due to cluster stability)
- Tweepy

The Logstash Pipeline
